Dr Shahizan | Lecturer & Software Enthusiast 🤝

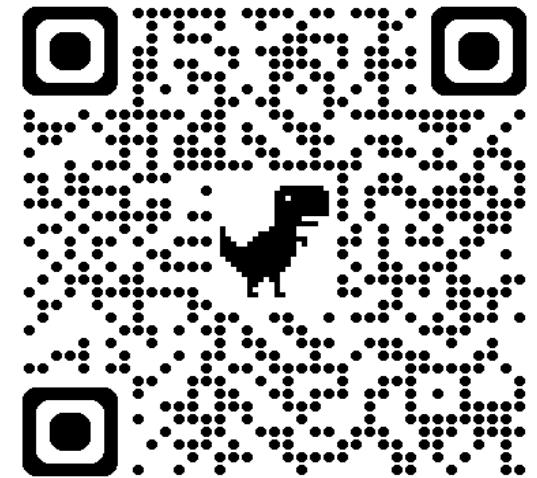

I'm a Lecturer at [Universiti Teknologi Malaysia \(UTM\)](#) passionate about education and fostering a love for software development. I'm constantly seeking opportunities to learn and contribute to the open-source community. Here's what I'm up to on GitHub:

- Working towards becoming a top GitHub contributor in Malaysia. 🇲🇾
- Committed to building a strong network within the developer community. Feel free to connect and share your ideas!.

Explore my projects below, and let's collaborate on something impactful! 😊

Courses

- [Research Design and Analysis in Data Science](#): A course that delves into the methodologies and analytical techniques in data science research.
- [Big Data Management](#): Focuses on the principles and practices of managing large and complex datasets.
- [High Performance Data Processing](#): Covers techniques and tools for processing data at high speeds for performance-critical applications.

Tech Giants Invest in Southeast Asia (USD)

Southeast Asian Nations Launch Formal AI Strategies

Malaysia, Singapore, Indonesia, and others have roadmaps to boost AI competitiveness.

85 Million Jobs Displaced,
97 Million New Roles Created

AI is set to automate many jobs while creating new opportunities and roles.

50% of Today's Work Activities Could Be Automated by 2025

50% of Today's Work Activities Could Be Automated by 2025

Next-level process automation and virtualization will transform industries globally.

Success of a Nation – Digital Economy

The Landscape of Artificial Intelligence

History of Artificial Intelligence

Once Upon A Time... ELIZA

ELIZA is an early natural language processing computer program developed from 1964 to 1967 at MIT by Joseph Weizenbaum. Created to explore communication between humans and machines, ELIZA simulated conversation by using a pattern matching and substitution methodology that gave users an illusion of understanding on the part of the program, but had no representation that could be considered really understanding what was being said by either party.

```
Welcome to
EEEEE   LL      IIII    ZZZZZZ  AAAA
EE       LL      II      ZZ      AA      AA
EEEEE   LL      II      ZZZ     AAAAAA
EE       LL      II      ZZ      AA      AA
EEEEE   LLLLLL  IIII    ZZZZZZ  AA      AA

Eliza is a mock Rogerian psychotherapist.
The original program was described by Joseph Weizenbaum in 1966.
This implementation by Norbert Landsteiner 2005.

ELIZA: Is something troubling you ?
YOU: Men are all alike.
ELIZA: What is the connection, do you suppose ?
YOU: They're always bugging us about something or other.
ELIZA: Can you think of a specific example ?
YOU: Well, my boyfriend made me come here.
ELIZA: Is it important to you that your boyfriend made you come here ?
YOU: He says I'm depressed much of the time.
ELIZA: I am sorry to hear that you are depressed.
YOU: It's true. I am unhappy.
ELIZA: Can you explain what made you unhappy ?
YOU:
```

National AI Strategies in Southeast Asia

Characteristic	Singapore	Indonesia	Malaysia	Philippines	Vietnam	Thailand
Strategy Name	National AI Strategy	Stranas KA	AI-RMAP	NAISR	National AI Strategy	NAIS
Launch Year	2019	2020	2021	2021	2021	2022
Key Focus	AI-fluent workforce	AI ecosystems	AI enhancement for competitiveness	Inclusive innovation	R&D	AI readiness
Ethical Considerations	Ethical governance	Ethical AI	Ethics	Governance	Ethics	AI governance
Investment/Funding	\$1.6 billion	PPPs	Not specified	R&D spending to 1% of GDP	40% of National Technology Innovation Fund	THB 25 billion
Economic Impact/Goals	\$4.64 billion by 2030	\$366 billion by 2035	Top 20 AI economy by 2030	12% GDP increase by 2030	AI innovation center in ASEAN by 2030	Not specified
Target/Goals	AI-ready financial ecosystem	20 million AI-literate citizens by 2029	Investor confidence	Inclusive innovation	Digital sovereignty	Digital infrastructure

Jobs that may be “*replaced*”
by AI and Automation

Content Creation and Journalists

AI will create new content

- Brands such as **USA Today**, **CBS**, and **Hearst** are already leveraging AI technology to generate content.
- **Wibbitz** provides a software-as-a-service (SaaS) platform that enables publishers to transform written articles into video content using AI-driven video production.

Taxi drivers, Shipping Crews & Pilots

- Major car manufacturers will roll-out driverless cars by 2019/20.
- No truck drivers or shipping crews?
- Entire transport system will change

Robot Nurse

Using a sling, it can lift a person from the sofa.

Robotic Seal

Medical Robot

Chefs and Food Delivery

Manufacturing Robot

Drone for Agriculture

Financial Analysts, Accountants & Bankers

- AI can detect **market patterns** and execute **trades** with **speed** and **precision** unmatched by even the most skilled human analysts.
- With **trillions of dollars** potentially at stake, it's no surprise that **machine learning** has become **indispensable** in modern finance, while experts warn that up to **30% of banking jobs** could be **automated by AI** within the next decade.

Pontential uses of AI in libraries

Benefits of AI Library Automation Software

- | | | | |
|----|---|----|--|
| 01 | Reduces operating costs | 02 | Automates manual tasks |
| 03 | Improves search and retrieval processes | 04 | Streamlined workflow |
| 05 | Provides personalized recommendations | 06 | Offers 24/7 support |
| 07 | Eliminate data errors | 08 | Personalized library services as per user intent |
| 09 | Increases resource accessibility | 10 | Secure data analysis and management |
| 11 | Better user experience | 12 | Proactive maintenance |
| 13 | Informed decision-making | 14 | Increased efficiency |

Changes in Workplace by 2030

- Many jobs will be automated
- 85 million jobs will be displaced, while 97 million new roles will be created
- 40% of core skills required today will change
- Seamless integration between humans and machines marks the rise of IR 5.0
- Degrees will lose relevance as skills become the new currency
- Graduates must stay in “beta mode”, continuously learning and adapting

Generative AI

Generative Artificial Intelligence (Generative AI) refers to a branch of **artificial intelligence** that leverages advanced **machine learning techniques** to model underlying **patterns in data** and subsequently generate **novel content**. Rather than reproducing the original data, Generative AI creates **new outputs** that resemble the **source material** in **structure** and **style**. Such outputs may take the form of text, images, video, audio, or other digital media.

WHICH COUNTRIES ARE Most Interested IN Generative-AI?

Artificial Intelligence is taking the world by storm. Research by Goldman Sachs suggests that new technology has the potential to drive a 7% increase in global GDP by 2033. But which countries are most interested in this global phenomenon?

Our analysis shows that people in the **Philippines** are keenest on AI technology, with **5,288 searches** for popular generative AI tools per 100k of its population. Users in **Singapore** (3,036 searches per 100k) and **Canada** (2,213 searches per 100k) also have high levels of interest.

Methodology: We built a seed list of over 90 of the most popular generative AI tools across four categories (text, voice, audio, and image). We then recorded the monthly Google search volume for each in every country, and calculated the overall volume across all tools per 100k population. All search volumes were scaled up according to the search engine market share in each country, using figures from statscounter.com.

Database Systems and the Relational Model

1 source

The source material provides an overview of **database systems**, starting with a contrast between the older **File Based System Approach** and the contemporary **Database System Approach**. It introduces core concepts such as the database, the **DBMS** (database management system), and the database application, before transitioning into a detailed discussion of the **Relational Database Management System (RDBMS)**. The text explains the terminology central to the relational model, including **relations** (tables), **attributes** (columns), **domains**, and various types of **keys** (candidate, primary, foreign). Finally, the document outlines essential **integrity constraints**, specifically **Entity Integrity** and **Referential Integrity**, which are crucial for ensuring data correctness, and concludes with activities designed to apply these relational concepts to a sample database schema.
